CRUSHED STONE AND SAND AND GRAVEL IN THE FIRST QUARTER 2015

An estimated 230 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the first quarter of 2015, an increase of 7% compared with that of the same period of 2014. The estimated annual output produced for consumption in 2014 was 1.26 billion metric tons (Gt), an increase of 7% compared with that of 2013.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the first quarter of 2015 was 159 Mt, an increase of 9% compared with that of the same period of 2014. The estimated annual output produced for consumption in 2014 was 897 Mt, an increase of 6% compared with the reported annual output for 2013.

The estimated U.S. output of *construction aggregates* produced and shipped for consumption in the first quarter of 2015 was 389 Mt, an increase of 8% compared with that of the same period of 2014. The estimated annual output produced for consumption in 2014 was 2.16 Gt, an increase of 7% compared with the reported annual output for 2013.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

The estimated *portland cement* consumption increased by 6% in the first quarter of 2015 compared with that of the first quarter of 2014 and increased by 8% for 2014 compared with annual consumption in 2013. This information is obtained from the USGS monthly survey of U.S. cement producers.

The quarterly sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The reason for a large change can be the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously reported data are occasionally revised, and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production-for-consumption of *crushed stone* in the first quarter of 2015 increased in eight of the nine geographic divisions compared with that sold or used in the first quarter of 2014. The largest increases in percentages were recorded in the West North Central and the East North Central divisions. Production-for-consumption increased in 31 of the 46 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, Florida, Missouri, Pennsylvania, and Georgia. Their combined total production-for-consumption was 86.2 Mt and represented an increase of 5% compared with that in the first quarter of 2014.

The estimated production-for-consumption of *construction sand and gravel* in the first quarter of 2015 increased from first quarter 2014 levels in six of the nine geographic divisions. The largest increases in percentages were recorded in the East North Central and West North Central divisions. Production-for-consumption increased in 27 of the 45 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, California, Arizona, Washington, and Colorado. Their combined total production-for-consumption was 67.4 Mt, which was an increase of 6% compared with that in the first quarter of 2014.

The estimated production-for-consumption of *construction aggregates* in the first quarter of 2015 increased in seven of the nine geographic divisions compared with that sold or used in the first quarter of 2014. The largest increases in percentages were recorded in the East North Central, the West North Central, and the Mountain divisions. Production-for-consumption increased in 30 of the 43 States that were estimated. The five leading States were, in descending order of production-for-consumption, Texas, California, Florida, Missouri, and Washington. Their combined total production-for-consumption was 135 Mt and increased by 5% when compared with that of the same period of 2014.

List services and Web feed subscribers are the first to receive notification of USGS minerals information publications and data releases. For information on how to subscribe, go to <http://minerals.usgs.gov/minerals/>.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

³Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

⁴State not included in quarterly survey.
