## CRUSHED STONE AND SAND AND GRAVEL IN THE SECOND QUARTER 2015

An estimated 360 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the second quarter of 2015, an increase of 5% compared with that of the second quarter of 2014. The estimated production for consumption in the first 6 months of 2015 was 589 Mt, an increase of 6% compared with that of the same period of 2014.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the second quarter of 2015 was 247 Mt, a very slight increase compared with that of the second quarter of 2014. The estimated production for consumption in the first 6 months of 2015 was 405 Mt, an increase of 4% compared with that of the same period of 2014.

An estimated 607 Mt of total *construction aggregates* was produced and shipped for consumption in the United States in the second quarter of 2015, an increase of 3% compared with that of the second quarter of 2014. The estimated production for consumption in the first 6 months of 2015 was 994 Mt, an increase of 5% compared with that of the same period of 2014.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

Portland (including blended) cement consumption increased by 2.3% in the second quarter of 2015 compared with that of the second quarter of 2014. Consumption in the first 6 months of 2015 increased by 3.6% compared with that of the same period of 2014. This information is obtained from the USGS monthly survey of U.S. cement producers.

This sample survey generates production for consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is almost never an indicator of the change in the demand in the State as a whole. The usual cause behind a large change can be attributed to the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously-reported data are occasionally revised, and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry

Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production for consumption of *crushed stone* in the second quarter of 2015 decreased in two of the nine geographic divisions compared with that sold or used in the second quarter of 2014. The decreases in percentages were recorded in the West North Central and the Pacific divisions. Production for consumption increased in 32 of the 46 States that were estimated. The five leading States, in descending order of production for consumption, were Texas, Pennsylvania, Illinois, Ohio, and Kentucky. Their combined total production for consumption was 116 Mt, an increase of 9% and represented 32% of the U.S. total.

The estimated production for consumption of *construction* sand and gravel in the second quarter of 2015 decreased in five of the nine geographic divisions compared with that sold or used in the second quarter of 2014. The largest decreases in percentages were recorded in the West South Central and the Mountain divisions. Production for consumption decreased in 24 of the 45 States that were estimated. The five leading States, in descending order of production for consumption, were California, Texas, Michigan, Minnesota, and Arizona. Their combined total production for consumption was 84.6 Mt, an increase of 4% and represented 34% of the U.S. total.

The estimated production for consumption of *construction aggregates* in the second quarter of 2015 decreased in four of the nine geographic divisions compared with that sold or used in the second quarter of 2014. The largest decreases in percentages were recorded in the West South Central, West North Central, and the Mountain divisions. Production for consumption increased in 24 of the 43 States that were estimated. The five leading States, in descending order of production for consumption, were Texas, California, Pennsylvania, Michigan, and Ohio. Their combined total production for consumption was 175 Mt, an increase of 5% and represented 29% of the U.S. total.

List services and Web feed subscribers are the first to receive notification of USGS minerals information publications and data releases. For information on how to subscribe, go to http://minerals.usgs.gov/minerals/.

<sup>&</sup>lt;sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

<sup>&</sup>lt;sup>2</sup>Data may not add to totals shown because of independent rounding and differences between projected totals by States and divisions.

<sup>&</sup>lt;sup>3</sup>Compared with the same period of preceding year; all percentages are calculated using unrounded totals.

<sup>&</sup>lt;sup>4</sup>State not included in quarterly survey.
