CRUSHED STONE AND SAND AND GRAVEL IN THE SECOND QUARTER 2016

An estimated 377 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the second quarter of 2016, an increase of 6% compared with that of the second quarter of 2015. The estimated production for consumption in the first 6 months of 2016 was 648 Mt, an increase of 11% compared with that of the same period of 2015.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the second quarter of 2016 was 269 Mt, an increase of 6% compared with that of the second quarter of 2015. The estimated production for consumption in the first 6 months of 2016 was 443 Mt, an increase of 8% compared with that of the same period of 2015.

An estimated 646 Mt of total *construction aggregates* was produced and shipped for consumption in the United States in the second quarter of 2016, an increase of 6% compared with that of the second quarter of 2015. The estimated production for consumption in the first 6 months of 2016 was 1.09 billion metric tons, an increase of 10% compared with that of the same period of 2015.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) on its quarterly sample survey by *construction aggregates* producers.

Portland (including blended) cement consumption increased by 3% in the second quarter of 2016 compared with that of the second quarter of 2015. Consumption in the first 6 months of 2016 increased by 7% compared with that of the same period of 2015. This information was obtained from the USGS monthly survey of U.S. cement producers.

This sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. In most quarters, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. The usual cause behind a large change can be attributed to the opening or closing of an operation, weather, or an external force that only the company or one of its operations experienced in that quarter. Previously reported data are occasionally revised, and the estimated quantities for the prior quarters are then recalculated. This latest release of the

quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production for consumption of *crushed stone* in the second quarter of 2016 increased in six of the nine geographic divisions compared with that sold or used in the second quarter of 2015. The largest increases in percentages were recorded in the Mountain and the East North Central divisions. The five leading States, in descending order of production for consumption, were Texas, Pennsylvania, Florida, Ohio, and North Carolina. Their combined total production for consumption was 116 Mt and represented 31% of the U.S. total.

The estimated production for consumption of *construction* sand and gravel in the second quarter of 2016 increased in five of the nine geographic divisions compared with that sold or used in the second quarter of 2015. The largest increases in percentages were recorded in the Mountain and the South Atlantic divisions. The five leading States, in descending order of production for consumption, were California, Texas, Utah, Michigan, and Minnesota. Their combined total production for consumption was 97.9 Mt and represented 36% of the U.S. total.

The estimated production for consumption of *construction aggregates* in the second quarter of 2016 decreased in two of the nine geographic divisions compared with that sold or used in the second quarter of 2015. The largest increases in percentages were recorded in the Mountain, South Atlantic, and the East North Central divisions. Production for consumption increased in 25 of the 43 States that were estimated. The five leading States, in descending order of production for consumption, were Texas, California, Michigan, Pennsylvania, and Ohio. Their combined total production for consumption was 179 Mt, an increase of 5%, and represented 28% of the U.S. total.

List services and Web feed subscribers are the first to receive notification of USGS minerals information publications and data releases. For information on how to subscribe, go to http://minerals.usgs.gov/minerals/.
