COPPER IN OCTOBER 2012

Average daily mine and refined production of copper in October increased by about 4% and 7%, respectively, from those in September principally owing to increased electrowon production and increased concentrate production in Utah. Electrowon production rose by 16% to its highest level since December 2008, as mines in Arizona continued to ramp up production curtailed following the onset of the recession in 2008. Rio Tinto plc reported that owing to an increase in ore grades during the fourth quarter 2012, mine production at the Bingham Canyon Mine in Utah was 38% higher and

downstream refinery production was 32% higher than respective production in the third quarter of 2012 (Rio Tinto plc, 2013, p. 4).

^PPreliminary. ^rRevised.

¹Data are rounded to no more than three significant digits; may not add to totals shown.

²Copper content of blister and anode.

³Stocks of refined copper as reported; no estimates are made for nonrespondents.

⁴Monthly estimates based on reported and 2010 annual data, comprising stocks at ingot makers, chemical plants, foundries, and miscellaneous manufacturers.

⁵London Metal Exchange Ltd., U.S. warehouses.
