Iron and Steel Scrap
Monthly Report No. 222

FERROUS SCRAP IN APRIL 1959

The combined domestic consumption of ferrous scrap and pig iron in steel-making furnaces during April 1959, was 2 percent less than during the record month of March 1959, however, the daily consumption rate of these materials in these furnaces during April was at a record level, according to the Bureau of Mines, United States Department of the Interior. Ferrous scrap consumed in steelmaking furnaces (open-hearth, Bessemer, basic oxygen process, and electric) was 2 percent less than during the preceding month, but was 104 percent greater than during the comparable month of 1958. The use of pig iron in these furnaces during April was 3 percent lower than during March, but 100 percent higher than during April 1958. The total steel-furnace melt (11,122,531 gross tons), consisted of 46 percent scrap and 54 percent pig iron, unchanged from March.

1/ Suppliers' stocks included with consumers' stocks.

2/ Excludes 221,127 gross tons of scrap shipped, transferred or otherwise disposed of during the month.

Prepared by James E. Larkin and James C.O. Harris, July 15, 1959, under the supervision of H.G. Iverson, Chief, Branch of Ferrous Metals and Ferroalloys, Division of Minerals.

Total domestic consumption of ferrous scrap for all purposes in April was slightly less than during March, but was at a record daily consumption rate of 221,497 gross tons, 3 percent greater than during the preceding month. Pig iron consumed during April was 2 percent less tonnagewise, but was 1 percent higher on a daily consumption rate basis as compared with March. The total melt (13,297,821 gross tons) consisted of 50 percent scrap and 50 percent pig iron.

The use of scrap by gray iron foundries during April totaled 911,313 gross tons, an increase of 4 percent over the 873,982 tons, used during March and the largest quantity consumed by this industry since March 1956. Pig iron consumed by this industry totaled 366,378 tons, an increase of 4 percent over the previous month.

Domestic stocks of ferrous scrap and pig iron held by consumers at the end of April totaled 11,371,033 gross tons, a slight decrease from those held at the end of the preceding month. Stocks of ferrous scrap were equivalent to a 37-day supply at the April daily consumption rate and totaled 8,275,777 tons, slightly greater than at the end of March, and those held on April 30, 1958. Pig iron stocks held by consumers and suppliers, totaled 3,095,256 tons, a decrease of 2 percent from those held on March 31, and 14 percent less than the record stocks of this commodity held on April 30, 1958.

Home scrap produced, plus purchased scrap received totaled 6,675,165 tons during April, a slight decrease from March; home scrap produced accounted for 3,919,279 tons, an increase of 1 percent over March. Net purchased scrap received totaled 2,755,886 tons, a decrease of 4 percent from March. Of the purchases, 85 percent was received from dealers and 15 percent from other sources. Purchased scrap received is a net figure computed by deducting scrap shipped, transferred, or otherwise disposed of by consumers from total scrap received from dealers and all others during the month.

DEALERS, BROKERS, AND AUTOMOBILE WRECKERS FOR APRIL 1959

The 955 identical companies reporting for March and April indicated that at the end of April, stocks of ferrous scrap in their yards had decreased 1 percent from the end of March. During April, receipts dropped by 4 percent and shipments were lower by slightly less than 1 percent compared with March. Receipts in April were 30 percent less than shipments. Of the scrap handled during April, six grades (No. 1 and No. 2 heavy melting steel, No. 1 and electric furnace bundles, No. 2 and all other bundles, low phosphorous and cast iron scrap other than borings) represented 68 percent of the total shipments and 44 percent of the stocks on April 30. Unprepared scrap stocks held in dealers and automobile wreckers yards at the end of April constituted 45 percent of the total.

1/ Includes shipments from yards, and direct shipments by dealers and brokers from other than yard operations.

CONSUMPTION OF FERROUS SCRAP AND PIG IRON

Consumption of scrap in April totaled 6,644,905 gross tons which was at an average daily rate of 221,497 tons or 61 percent greater than for the year 1958.

In April, open-hearth furnaces used 61 percent of the total scrap, and 84 percent of the pig iron compared with 63 and 85 percent, respectively, in March; electric furnaces in April used 8 percent of the combined total of ferrous scrap and pig iron charged to all furnaces, with open-hearth using 72 percent. During 1958, these percentages were 7 and 73, respectively. Blast furnaces used 6 percent of the total scrap; the corresponding percentage for the year 1958 was 5.

During April, steelmaking furnaces (open-hearth, Bessemer, oxygen steel process, and electric) accounted for 77 percent of the total scrap, and 90 percent of the pig iron consumed, compared with 79 and 90 percent, respectively, during March. In 1958, steelmaking furnaces used 76 percent of the total scrap, and 90 percent of the pig iron. The remainder was used in iron-making furnaces, principally the cupola. Consumption by type of furnace during April is shown in the following table:

Table 6 - Consumption of ferrous scrap and pig iron by manufacturers of ingots, steel castings and iron foundries during April 1959, by type of furnace, in gross tons

FOREIGN TRADE 1/

According to the Bureau of the Census, exports of ferrous scrap totaled 269,014 gross tons in April and 254,356 tons in March. During May 1959, the Office of Export Supply, United States Department of Commerce, issued scrap export licenses for 310,086 gross tons. Exports of pig iron during April totaled 925 tons and 92 tons in March. Imports of scrap totaled 19,484 gross tons in April compared with 21,141 tons in March. Imports of pig iron totaled 34,740 gross tons in April and 7,542 tons in March. In addition, to the foregoing imports of pig iron during April, there was 1,182 tons of sponge iron, valued at \$151,933, imported, of which 149 tons came from Canada and 1,033 tons from Sweden.

1/ To conform with other data in this report foreign trade data include tin plate scrap.

2/ Preliminary data subject to revision. Value may differ widely because of variations in quality, classes, and grade combinations.

3/ Includes terne plate, tin plate, circles, cobbles, strip, and scroll shear butts.
