IRON AND STEEL SCRAP IN JANUARY 1992

Returns from 44% of reporting consumers, representing 57% of total scrap consumption, indicated that consumption of iron and steel scrap on a daily average basis was up 7% compared with that in December 1991, according to the U.S. Bureau of Mines. Compared with December 1991 data, daily average production was up 6%, net receipts were up 6%, and stocks at the end of the month were up slightly.

Exports of ferrous scrap for the month of January 1992 were 15% higher than those for December 1991. Turkey was the principal country of destination, accounting for 40% of the total exports in January 1992, followed by The Republic of Korea with 20% and India with 13%.

On a daily average basis, pig iron production was up 13% and consumption was up 10% in January 1992, compared with that of the previous month. Stocks of pig iron at month's end were up 6%, compared with those at the end of December 1991.

Table 14 shows that, based on quantity, Los Angeles, CA, was the leading customs district for exports in January 1992, accounting for 21% of total exports, followed by New York, NY, with 16%, and Boston, MA, with 15%. Also based on quantity, New York, NY, was the leading customs district for re-exports in January 1992, accounting for 74% of total re-exports, followed only by Laredo, TX, with the remaining 26%.

Table 15 reveals that, on a quantity basis, Seattle, WA, was the leading customs district for imports in January 1992, accounting for 42% of the total imports, followed by Detroit, MI, with 33%, and Buffalo, NY, with 11%.

Prepared by the Branch of Metals and Branch of Data Collection and Coordination, July 28, 1992.

According to the American Iron and Steel Institute, domestic raw steel production in January 1992 amounted to 7,035,000 metric tons, up 6% compared with 6,665,000 metric tons in December 1991, and up 2% compared with 6,874,000 metric tons in January 1991. The electric furnace (EF) portion of raw steel production was 37% for January 1992, 35% for December 1991, and 39% for January 1991. Raw steel capability utilization was 81% for January 1992, 74% for December 1991, and 75% for January 1991. Continuous cast steel production in the United States represented 77% of total raw steel production in January 1992, 78% in December 1991, and 74% in January 1991.

An internal evaluation indicates that ferrous scrap consumption by electric furnace manufacturers of raw steel in January 1992 was understated. This amounted to approximately 340,000 metric tons for January 1992 (preliminary), and 190,000 metric tons for December 1991 (revised).

There was no raw steel produced in U.S. Open Hearth Furnaces (OHF's) in January 1992. Consequently, there was no ferrous scrap or pig iron consumed in OHF's in January 1992. This was the first time since 1868 that there was no domestic production of open hearth steel reported.

Comparative monthly composite prices in dollars per long ton (\$/lt) and dollars per metric ton (\$/mt) for No. 1 heavy melting steel scrap are shown as quoted by two sources:
