## MINERAL INDUSTRY SURVEYS

T S Ary, Director

Washington, DC 20241

For information call:

Platinum, Quarterly

J. Roger Loebenstein, Commodity Specialist, (202) 634-1058

Evangeline Hemphill, (Survey Data Information), (202) 634-1106

For MINES-DATA computer bulletin board call:

(202) 634-4637 (2400,N,8,1) for access

(202) 634-9632 for technical assistance

### PLATINUM-GROUP METALS IN THE FIRST & SECOND QUARTERS 1991

In the first half of 1991, refinery production of platinum and palladium recovered from the low level of the preceding half-year, according to the Bureau of Mines, U.S. Department of the Interior. As indicated by the accompanying data, some domestic refining capacity had been shut down temporarily in the second half of 1990.

The Stillwater Mining Co. (SMC), owned by Chevron Corp. and Manville Corp., postponed expansion plans that would have doubled ore production to 2,000 short tons per day. The Stillwater Mine in Montana was the only producer of platinum and palladium in the United States.

The Bureau's Reno Research Center investigated the use of bacteria to oxidize flotation concentrate from the Stillwater Mine. After bacterial pretreatment, tests were conducted to determine if the PGM could be extracted from the biooxidized residue using cyanide. In the most successful test, 34% of the platinum, 75% of the palladium, 94% of the rhodium, and 97% of the gold was removed from the biooxidized concentrate. Copies of the report, RI 9371, may be obtained from the Bureau's Pittsburgh office by telephoning 412-892-4338.

Impala Platinum Ltd., in the Republic of South Africa, announced plans to increase its PGM production, principally through its subsidiary, Messina Ltd. Impala's PGM output is expected to increase 27% between 1991 and 1995.

In January, the International Precious Metals Institute (IPMI) sponsored a seminar on PGM in Las Vegas, NV. Papers were presented on the supply and demand for PGM, autocatalyst recovery, diesel exhaust control, environmental technology, fuel cells, and rhodium catalysts.

The proceedings of the meeting were published and are available for purchase from IPMI, 4905 Tilghman St., Suite 160, Allentown, PA 18104.

In June, IPMI hosted its 15th Annual Meeting in Naples, FL. Two of the papers presented at the meeting concerned the Basel Convention for the transboundary shipment of hazardous materials and how, if adopted, it may affect the recycling of precious metals. The proposed procedures in the Convention require prior written consent by all parties, i.e., the generating country, the receiving country, and the transit countries. The precious metals industry is concerned about the lack of distinction in the Convention between hazardous waste and materials meant for recycling. Another concern is for the additional costs involved in complying with the Convention.

A less severe alternative to the Basel Convention is the OECD approach, which establishes three levels of control for shipping materials. The "green light list" would include metals with no controls and consequently no transport restrictions. The "amber light" would include some hazardous materials and the "red light list" would include hazardous waste and fall

under full Basel regulation. "Amber light" materials would be sent only to licensed facilities, and written contracts between the sending and receiving parties would be required. A company exporting material would be required to notify the receiving country in writing and the receiving country would have limited right of refusal to accept the material. Most precious metals waste would be in this class.

In May, Nissan Motors announced that it had developed a palladium-only catalytic converter. News of the announcement caused

an immediate reaction in markets in New York, causing platinum prices to drop and palladium prices to rise. Nissan's converter must still undergo testing to determine its reliability in both the U.S. and Japanese car markets. In June, Isuzu Motors announced that it had developed a palladium catalytic converter for use on its 1994 model 3-ton trucks for the United States market. The Isuzu announcement further depressed platinum prices. In a similar incident 3 years ago, an announcement by Ford Motor Company that it was testing a platinum-free catalytic converter had a large, but temporary, effect on the prices of platinum and palladium.

p/Preliminary. r/Revised.

1/Typically, nearly all of the platinum and palladium are secondary metal; the other metals are entirely secondary.

2/Data may include estimates.

3/Data may not add to totals shown because of independent rounding.

4/Revised to zero.

## Platinum & Palladium Production Toll-Refined Plus Nontoll-Refined

June 30-----	10,421	10,021	482	46	1,015	846	22,831

r/Revised.

1/Includes metals in depositories of the New York Mercantile Exchange; on June 30, 1991, this comprised 3,585 kilograms of platinum and 2,535 kilograms of palladium.

2/Data may not add to totals shown because of independent rounding.

3/Includes data from companies reporting annually; quarterly figures not adjusted.

r/Revised.

1/Comprises primary and nontoll-refined secondary metals.

2/Data may not add to totals shown because of independent rounding.

3/Defined as mine production + non-toll production + imports - exports + beginning stocks - ending stocks.

Between 1986 and 1988, unspecified PGM imports and exports were divided evenly between platinum and palladium.

Iridium and osmium exports included with ruthenium, in 1989 and 1990.

4/1986-90 platinum, palladium, and rhodium sales to the automotive industry are estimated based on U.S. light truck sales and U.S. automobile production.
