PLATINUM-GROUP METALS IN MARCH 2018

Imports for consumption of platinum-group metals (PGMs) in March 2018 were dominated by palladium, platinum waste and scrap, and platinum, which made up 30%, 19%, and 30%, respectively, of imports (tables 3, 4). Imports for consumption of PGMs, including waste and scrap, were 21,100 kilograms (kg)* in March 2018, a 26% increase compared with February 2018 and a 64% decrease compared with March 2017. For March 2018, the leading import sources for PGMs into the United States were Germany, South Africa, and the United Kingdom (tables 3, 4).

Prices

Compared with the prior month, the Engelhard average March prices decreased by 3% for palladium and platinum and increased slightly, by 4%, and by 3% for iridium, rhodium, and ruthenium, respectively. Compared with March 2017, the March 2018 average price of platinum was essentially unchanged, whereas prices of iridium, palladium, rhodium, and ruthenium increased by 32%, 27%, 101%, and 383%, respectively (fig. 1, 2, tables 1, 2). Rhodium's price increase was related to increased demand by industrial users in conjunction with a limited supply (Thompson Reuters Corp., 2017). Ruthenium's price increase was the result of increased purchases of the metal likely owing to reports of new uses for it in chemical catalysts, hard-disk drives, and semiconductors (Jonson, 2017).

Industry News

Glencore plc and Vale SA, both of which produce byproduct PGMs at their Sudbury Basin operations in Canada, received board approval to develop their Onaping Depth and Copper Cliff Deep projects, respectively, to replace declining production from current mines. Glencore's Nickel Rim South Mine was scheduled to cease operations in 2022, and operations at its Fraser Mine were projected to continue until 2024–25. First production at Onaping Depth was expected in 2023, and full production would be reached by 2025. Full production for

Vale's Copper Cliff Deep project was expected by 2020–21 (Tollinsky, 2018).

Cyprus-based Karo Resources Ltd. signed an agreement with the Government of Zimbabwe to develop a platinum project west of Harare in the Mhondoro-Ngezi platinum belt. The project would include a mine and refinery and was expected to employ 15,000 workers. Construction was set to start in July with first production expected in 2020. The company anticipated an annual production of about 43,500 kilograms of PGMs during the first 3 years (Dzirutwe, 2018).
